

# Biz Craft Global

*Crafting Tomorrow's Solutions*

An AI engineering consultancy that designs and delivers production-grade AI systems — RAG pipelines, multi-agent platforms, and secure self-hosted deployments for finance, legal, healthcare, and enterprise operations.

PRODUCTION-GRADE

## What We Build

### Advanced RAG Systems

Standard, Graph, and Hybrid RAG architectures for accurate, context-aware knowledge retrieval at scale.

### AI Frameworks & Tooling

LangChain, LangGraph, DSPy, Instructor, and Pydantic v2 — built for production, not prototypes.

### Secure & Self-Hosted AI

Air-gapped deployments, PostgreSQL RLS, data residency, and zero vendor lock-in for regulated industries.

### Multi-Agent Orchestration

LangGraph-based agent workflows, MCP integrations, and autonomous decision pipelines.

### Model & System Evaluation

Structured benchmarking, retrieval accuracy testing, and regression pipelines using DeepEval & LangSmith.

### LLM Fine-Tuning & Optimisation

Domain-specific fine-tuning, prompt engineering, and DSPy pipelines to maximise model performance.

## Core Technology Stack

## Why Biz Craft Global

---

### Framework Depth

We implement full LangGraph graphs, custom MCP servers, and DSPy pipelines — not API wrappers.

### Evaluation as Standard

Every system ships with evaluation pipelines for accuracy, latency, and regression.

### Security by Design

RLS, namespace isolation, and scoped MCP access are structural decisions, not add-ons.

### Vendor Independence

SaaS, BYOD, or fully air-gapped — you choose the infrastructure, we deliver it.

## Deployment Options

---

### MANAGED

#### Fully Managed SaaS

Production-hardened cloud with multi-tenant isolation. Ideal for fast-moving teams.

### HYBRID

#### Bring Your Own Data

Our agent layer connects to your databases and vector stores. You own all your data.

### SELF-HOSTED

#### Air-Gapped / On-Premise

Full Helm + Docker Compose deployment within your perimeter. No external egress.
